

Is this drill press underpowered?

I believe this little drill press may be slightly underpowered.

As you can see, the Forstner bit seems to collect wood shavings and come to a complete halt. Its fairly dangerous and I have plans to stabilize the press and use a fence when possible.

If anyone has more tips on how I can Improve performance please let me know! This video also features a new animated logo and if it works out I will be starting all the videos like this one, with fewer vocals over the top of them.
